## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-19, drawn to a bipolar transistor, classified in class 257, subclass 328.
  - II. Claims 20-23, drawn to a method of forming a bipolar transistor, classified in class 438, subclass 312.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the bipolar transistor can be formed by, providing a T-shape emitter, which allows one of the alignment tolerances to be avoided, thereby enabling a narrower emitter width, instead of the cross-shaped claimed by Applicant.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
